

Earth Systems Salinization Lab

Teacher Key

In four weeks, your group will report on the results of your experiment. Each student will turn in a lab report.

Use the **Salinity Experiment Reporting Template** to help you structure your report.

Your group will also do an oral presentation. The presentation should take no more than 5 minutes. It should focus on:

- the type of seeds used in the experiment
- comparisons you found between the growth of plants in the three salinity conditions (you will use the computer to project Excel graphs of your data)
- whether or not salt affected the growth of your plants
